

Different Types of Dashboard Tabs

[top](#)

There are three types of dashboard tab available in Yellowfin; Standard, KPI, and Pre-Built.

Tab Type	Description
Standard	These tabs have the broadest range of functionality available to them, including linked filters and series. The only reason you would not use a Standard Tab when creating a new tab is if you wanted to include a KPI Report on the tab.
KPI	This tab type is only used if you want to include KPI Reports on your tab. The reason this is a separate type is that some functionality is incompatible with KPI Reports, so the tab disables things like filters and linked series.
Pre-Built	This is a tab that has been created by a user and is not currently displayed on your dashboard. This does not involve creating a new tab, just selecting an existing one to display.
