

Developer Toolkit

This section provides detailed guides and documentation that will allow developers to use Yellowfin functionality and APIs in their own environments.

Data Source Connectors

Create custom third-party connectors to extract data from a data source. [>>>](#)

Advanced Functions

Create your own advanced functions to be used in Yellowfin reports. [>>>](#)

Deployment

Refer to our deployment section for a selection of guides on setting up different environments. [>>>](#)

Transformation Widgets

Build your own ETL widgets to be used in Yellowfin's Data Transformation module. [>>>](#)

Custom Formatters

Use this guide to create your own custom formatters. [>>>](#)

Custom Converters

Code your own data type converters with the help of this manual. [>>>](#)

Generic Configuration UI

This section provides information on a generic API for configuration and persistence to plug-ins. [>>>](#)

Data Science Integration

Integrate your PMML, PFA, R, and H2O.ai data science models into Yellowfin. [>>>](#)

Integration

Learn about the various methods Yellowfin could be integration into a third-party application. [>>>](#)

Web Services API

Integrate advanced BI functionality into your application with Yellowfin's web services. [>>>](#)
