

Output Steps

Output steps are included in the Data Transformation module to allow you to securely save your transformed data. You can simply drag a step from the Output Steps panel onto the Transformation Flow Builder canvas to include it in your flow.

Types of Output Steps

Click on the name of an output step in the table below to learn how to configure it. (**Note:** Currently only one type of output step is supported.)

Icon	Output Step	Description
	SQL Database	This output step is used to store data into an SQL database.
